

Slowing Down Your Mouse in Windows XP

- Open the Start menu by clicking on the **Start** button
- Click on **Settings**.
- Click on **Control Panel**.
- Double click on **Mouse**. The mouse properties page should be displayed (see fig. 1)

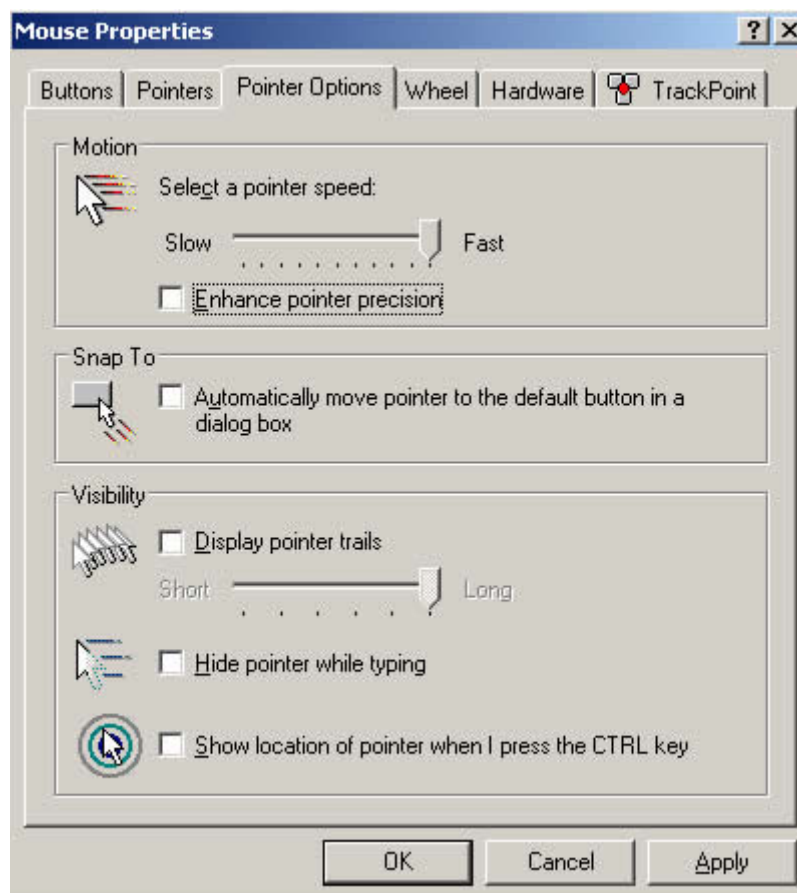

Fig 1

- Click on the **Pointer Options** tab.
- **Click and drag** the **slider** underneath **Select a pointer speed**,
- Click **Apply** and then **OK** or press **Enter** to confirm your choice and exit the mouse properties.

Notes

- To open Mouse, click **Start**, point to **Settings**, click **Control Panel**, and then double-click **Mouse**.
- Adjusting the speed of your mouse pointer causes the pointer to respond more quickly or slowly to the movements of the mouse itself.
- Select the **Enhance pointer precision** check box to provide finer control of your pointer at short distances without losing the ability to move the pointer quickly across the screen. Clear the check box to turn off this feature.
- You can have the mouse snap to default buttons (such as **OK** or **Apply**) in dialog boxes by selecting **Automatically move pointer to the default button in a dialog box** under **Snap To**.
